

DESIGN-LANGUAGE SPECIFICATION · V1.0

Three Flutter forms, reimagined in one language.

A CORE TOKENS

COLOR · LIGHT / DARK

primary
#0053

success
#16A3

warning
#F59E

error
#EF44

surface
#F7F9

input fill
#F1F5F8

dark surface
#0F17

dark card
#1E29

dark success
#34D3

Theme-dependent tokens must read via `AppColors.of(context)` (ThemeExtension). Brand hues may stay static.

GEOMETRY & MOTION

sm 8

md 12

lg 16

xl 24

full pills

Inputs use lg 16 · cards xl 24 · buttons & chips full. Field height ≥ 50dp touch target.

Motion: entrance/press 150–300ms · curve `easeOutCubic` ≈ web [.22,1,.36,1] · success pops `elasticOut` · infinite loops must gate on `MediaQuery.disableAnimationsOf`.

B SHARED COMPONENTS

VOLTIUMBUTTON · 4 VARIANTS

Continue

End Rental

Maybe later

Learn more

Primary = gradient CTA · **destructive** = solid error · secondary = tonal outline · ghost = text. Loading keeps label width, swaps spinner, disables taps. Semantics(button, label) built in.

FIELD ANATOMY

FULL NAME *

e.g. Rohan Sharma

IFSC CODE *

SBIN0001234

Lead icon · 1.5px resting border (visible in light) · focus adds 2px primary + halo · valid = green edge + check · error = red fill + shake-in message.

CAPTURE TILE & STATUS

Take photo

or choose from gallery

Camera-first (`capture=environment`) spirit: camera source preferred, preview with filename/size badge, remove affordance, success tint when attached. Skeletons over spinners for list loads.

Dark mode contract: every screen must pass with `ThemeColors.dark` / `amoled` — surfaces `colors.card` (never `Colors.white`), muted text `#94A3B8` (7.0:1 on `#0F172A`), success/error/warning use dark-tuned token values. **Light-mode statics of theme-dependent tokens are a bug.**

01 Rider Details Form

user_onboarding_screen.dart

The KYC workhorse: personal identity, documents, payout account and biometrics — restructured into three gated steps with a persistent completeness meter, autosaved draft and a review-before-submit gate.

Rider DetailsKYC · STEP 2 OF 529%

Draw your signature

Clear

Use your finger — printed on your rental agreement.

Review & submit screen follows — every value shown once before upload with staged progress.

Back

Review & submit

Data collected (unchanged 1:1) & behavior contract

COLLECTED FIELDS — 14 TOTAL

Full name*

Email (valid-if-present)

DOB* 1940–today

Father's name*

Mother's name*

Address*

Aadhaar front*

Aadhaar back*

PAN*

Bank name*

Account 8–18 digits*

IFSC*

Selfie*

Signature*

Read-only verified phone from login is displayed, not collected. Validators mirror `FormValidators.dart`.

BEHAVIOR CONTRACT

3–step gating mirrors `_canProceedCurrentStep`; per-step inline errors instead of a toast dump.

Draft autosave per keystroke (debounced) — restores on re-entry, toast on restore failure (PR-E path).

Review step shows all 14 values before submit; missing fields listed in a destructive banner.

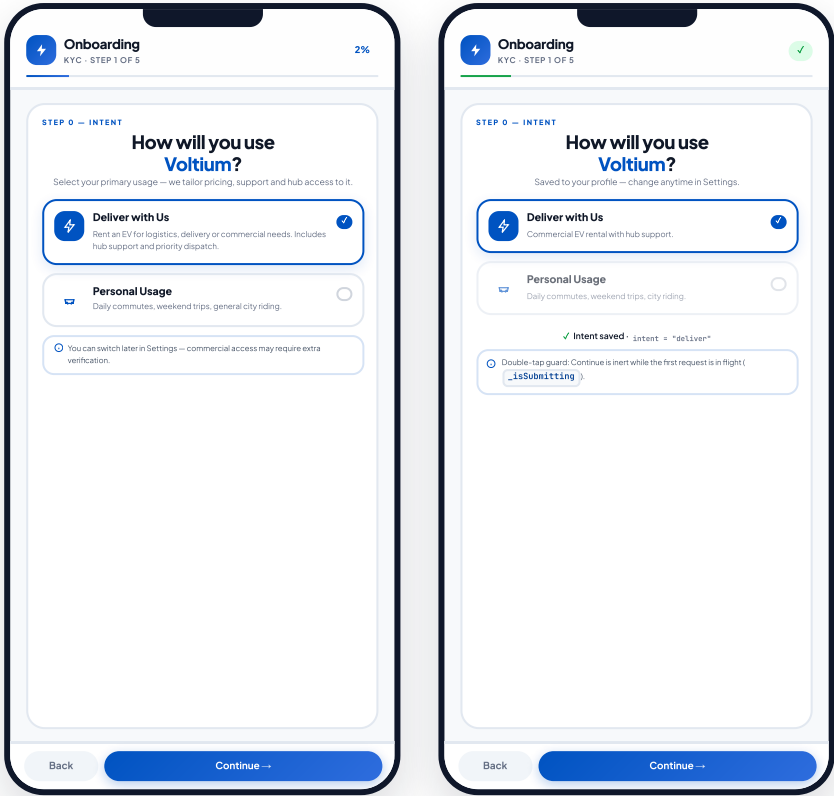

Upload runs staged progress per document; success screen confirms; draft is cleared.

Completeness meter (header) always shows % — never blocks navigation, only submit.

02 Onboarding Form — Intent of Use

intent_of_use_screen.dart

Single-decision screen: the rider's primary usage customises pricing, support and hub access. Redesigned as large, glanceable selection cards with an honest, always-visible affordance for switching later.

Data collected & behavior contract

COLLECTED FIELD — 1 TOTAL

intent* — "deliver" | "personal"

Persisted via `PUT /rider/profile` (`UpdateProfileRequest(intent)`). Exactly one selection is required; nothing else is asked on this screen.

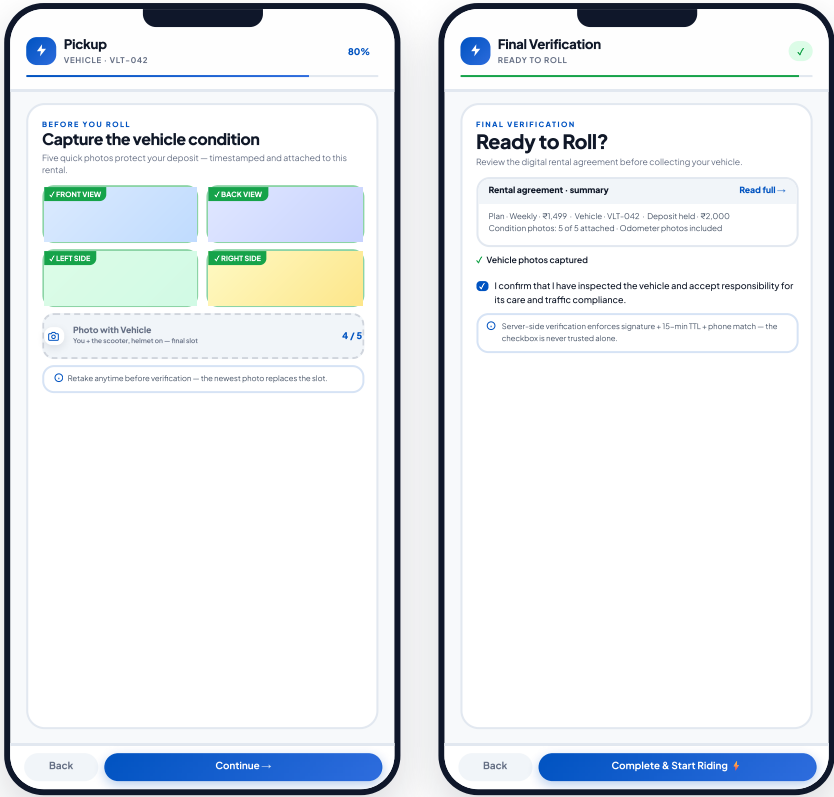

BEHAVIOR CONTRACT

- Selection cards replace small radio rows: 64dp minimum height, icon chip + title + one-line description, single-select with animated check.
- Continue is disabled until a card is chosen — the disabled style is the neutral token pair, never red.
- Info banner stays on-screen: switchability later + commercial-verification caveat (honest expectations).
- Double-tap race guard from ONBOARDING-AUDIT P1-4 is preserved: submitting state blocks re-entry.
- Session-missing fallback keeps the toast error path (`riderId == null`).

03 Pickup Form — Condition Capture & Final Verification

vehicle_photos_screen.dart · pickup_verification_screen.dart

The vehicle handoff: five condition photos that protect the rider's deposit, then a single honest confirmation gate before the rental goes live. Photos-first layout with per-slot completion state.

Data collected & behavior contract

COLLECTED FIELDS — 6 TOTAL

Photo — Front view*

Photo — Back view*

Photo — Left side*

Photo — Right side*

Photo — With vehicle*

Agreement confirmation*

Slot labels map to `pickupPhotoFront/Back/Left/Right/WithVehicle` on the rider profile.

BEHAVIOR CONTRACT

Photos-first grid with per-slot ✓ badge and n/5 counter; retake replaces the slot in place.

Agreement summary card before the checkbox — plan, vehicle, deposit, photo count — so confirmation is informed, not blind.

Complete & Start Riding stays disabled until the confirmation is checked (existing `_agreedToTerms` gate).

Server is the source of truth: signature + 15-minute TTL + phone match verified server-side.

Success routes to the active dashboard; error keeps the toast path (`safeErrorMessage`).
